

AURO Cloud Powered by OpenStack

AURO delivers public cloud benefits with the control and security of a private cloud environment. You now have ready access to Canada's Public Cloud™ with distributed compute, storage and network services that utilize the industry leading OpenStack cloud operating system. AURO is based in Canada and meets all Canadian privacy requirements while delivering a public cloud environment that has API and service level compatibility with other leading public clouds like AWS. You can now use the same toolsets, scripts, and APIs while benefiting from Canada's unique regulatory environment.

PUBLIC OR HOSTED PRIVATE CLOUD

OpenStack delivers a powerful cloud operating system – AURO has added important functionality, enterprise grade infrastructure and system enhancements to make it even more enterprise friendly. Our enhancements make the cloud more accessible, available, stable, and secure. Through easy to use APIs and existing toolsets, clouds workloads can be moved with a click of the mouse.

By offering a public cloud using OpenStack, customers benefit from the latest technologies offered by technology leaders, as well as minimizing any expensive capital expenditures or added burden to your resources. Our cloud runs on enterprise grade hardware with built-in fault tolerance, high availability, and easily allows each tenant to be securely segregated allowing for compliance related workloads.

If you are looking for more flexibility and want to use the public cloud with your on-premise deployment, and let you leverage the latest innovations that deliver agility, scalability, security, and real time resources.

AURO OPENSTACK

OpenStack delivers a powerful cloud operating system – AURO has added important functionality, enterprise grade infrastructure and system enhancements to make it even more enterprise friendly.

TRUSTED 24/7 OPERATIONAL SUPPORT

Our support team is an extension of your business. Whether it is legacy IT, OpenStack, or other virtualized environments, we can help you monitor, troubleshoot and maintain it. We offer comprehensive support at no additional charge.

ENTERPRISE GRADE, PRODUCTION READY

- Get higher ROI over traditional infrastructure and virtualization
- Lower cost than many public clouds
- Meets Canadian privacy and data requirements
- Enhanced security
- Rapid flexibility and scale
- Enable DevOps to meet mission-critical projects
