

Six Principles of an Enterprise Cloud

OpenStack is the ideal platform for delivering a new user experience inside of the enterprise. Unlike traditional solutions, AURO delivers the best of major public clouds by offering true Infrastructure as a Service (IaaS) to everyone with the control of a private cloud. More importantly, it gives enterprises advanced DevOps toolsets with the ability to leverage single platform for public, private and hybrid cloud scenarios with the expensive capital expenditures to do it yourself. AURO enables your developers, streamlines existing processes, centralizes IT control and governance, and delivers the ability to support new applications and services around mobile, social, Software as a Service (SaaS), web applications and big data.

99.99%+ Uptime

There is no downtime and is always available
High uptime cloud APIs and availability

Robust Management

Achieve optimal performance via centralized administration
Tools to secure your cloud

Open Architecture

Use the components you want, public cloud fidelity

Hybrid Cloud

Interoperability

Common architecture for hybrid, public and private cloud

Scalable and

Elastic

Supports dynamic workloads and web-scale IT

Global Support

And Services

Achieve SLAs and adhere to existing IT policies
